

Given heights of candles in a cake, give the maximum number of candles which can be blown off in a single attempt.

```
static int birthdayCakeCandles(int n, int[] ar) {  
    HashMap<Integer, Integer> heights = new HashMap<>(); int max = 0;  
    for(int i : ar){  
        max = Math.max(max, i);  
        if(heights.containsKey(i))heights.replace(i, heights.get(i)+1);  
        else heights.put(i, 1);  
    }  
    return heights.get(max);  
}
```
